#110	Enzymes
#120	Colorants
#130	Coccidiostats
#140	Feed additives
#150	Coefficients/factors
#35	Energy Fur

OK Cancel

Groups codes and names are edited directly in the table.

It should be kept in mind that:

- codes and names must be unique globally (i.e. within all the groups)
- groups supplied with the program (written in gray text with codes beginning with # character) are non- editable and indelible

The button with a minus sign on it is used to delete redundant groups. It is available both in the quickslot bar and in the table context menu. Groups to which nutrients are assigned are indelible.
